Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE
WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR CODEBOOK NOTES

- 1) The data for the study are from the NATIONAL HOUSEHOLD SURVEY ON DRUG USE AND HEALTH (NSDUH), 2004 [ICPSR 4373]. In addition to the 2004 NSDUH data, the study utilized new variables that were derived from the original dataset by the principal investigator, namely recoded variables, interaction variables, and computed indices. The dataset contains a total of 3,011 variables. The first 2,690 variables are drawn from the 2004 NSDUH dataset and the remaining 321 variables were created by the principal investigator. Variables created by the principal investigator are manipulations of the first 2,690 variables. Specifically, these variables include depression indices, drug dependence indicators, interactions with gender and other demographic variables, and dichotomous recoded variables relating to types of drug abuse and criminal behavior.
- 2) Users should refer to the 2004 NSDUH [ICPSR 4373] for additional information on the study design and methodology, sampling, and weighting. Additionally, users can access the original 2004 NSDUH codebook and data collection instruments through ICPSR 4373, including the Computer-Assisted Interview Pillcards and Showcards and the Computer-Assisted Interview Specifications.
- 3) Included in Appendix A to this codebook is the original data coding information provided by the principal investigator. ICPSR assigned variable labels based upon this original documentation, which are listed in Appendix B. ICPSR also edited some value labels and variable labels in the dataset based upon correspondence with the principal investigator. A list of the edited variables is included in Appendix C to this codebook.
- 4) While the first 2,690 variables in this data collection are from the 2004 NSDUH [ICPSR 4373], these variables may exhibit minor formatting differences when compared with the original ICPSR 4373 data. Additionally, all missing data are declared -1 "Blank" for the following variables in this data collection whereas, in the original ICPSR 4373 data, the missing data responses for these variables were coded into more specific categories such as "DON'T KNOW", REFUSED", "LEGITIMATE SKIP", etc.:
 - SNYSELL "SOLD ILLEGAL DRUGS"
 - SNYSTOLE "STOLEN/TRIED TO STEAL ANYTHING WORTH > \$50"
 - SNYATTAK "ATTACKED SOMEONE W/INTENT TO SERIOUSLY HURT THEM"
 - YEYSELL "SOLD ILLEGAL DRUGS"
 - YEYSTOLE "STOLEN/TRIED TO STEAL ANYTHING WORTH >\$50"
 - YEYATTAK "ATTACKED SOMEONE W/INTENT TO SERIOUSLY HURT THEM"

- 5) ICPSR also modified some variables' value labels in the dataset in order to render them consistent with the labeling provided in the original codebook. Specifically, ICPSR assigned the value labels of 0 "No depression" and 9 "High depression" to the following variables:
 - ADDEPRESSIONINDEX "ADULT DEPRESSION INDEX"
 - DEPRESSIONINDEX "ADULT & YOUTH DEPRESSION INDEX"
 - DEPRESSIONINDEX2 "ADULT & YOUTH DEPRESSION INDEX REVISED (THOSE NOT ASKED CODED AS MISSING INSTEAD OF 0)"
- 6) Users should be aware that, for some variables, differences exist between the information contained in the original codebook provided by the principal investigator and the labeling of some variable and value labels in the data. Specifically, ICPSR noted the following differences:
 - For the OTHILLICITRC variable, the original codebook lists a value of 4 "never" which is not present in the data. Rather, there is a similar value of 9 "Never used other drug" in the data.
 - For the ANYILLICITRC variable, the original codebook lists a value of 4 "never" which is not present in the data. Rather, there is a similar value of 9 "Never used other drug" in the data.
 - For the DRUGAVAIL variable, the value label of 16 "Easy to get any type of drug" is noted as "1" in the original codebook.
 - In the data and the NATIONAL HOUSEHOLD SURVEY ON DRUG USE AND HEALTH, 2004 [ICPSR 4373] codebook, the AGE2 variable is assigned a variable label of "RECODE - FINAL EDITED AGE", however the variable label of the AGE2 variable is listed as "age Groups" in the original codebook created by the principal investigator.
 - For the IREDUC2 variable, the variable label of "IMPUTATION REVISED EDUCATION" is noted as "education groups" in the original codebook.
- 7) ICPSR renamed the LDSAVAIL variable as "LSDAVAIL" to create consistency between the variable name and variable label. ICPSR also changed the word "MARIJUAND" to "MARIJUANA" in the variable labels of the MJANDCOKE and MJCOKELY variables.
- 8) ICPSR recoded blanks in numeric variables to -1 and labeled them Blank. All declared missing codes other than -1 "Blank" and the -9 "Missing" codes described in Appendix C were assigned by the principal investigator in the original data file.

- 9) Because Stata does not permit value labels to be attached to non-integers, ICPSR removed some value labels from the CIGAVGD "AVG NUMBER OF CIGARETTES SMOKED PER DAY" variable in the Stata files for this data collection. Full value labels for values in the CIGAVGD variable are contained in the ICPSR codebook, however, as well as in the SAS and SPSS files.
- 10) Users should be aware that, in earlier versions of SAS, if a value label is longer than 16 characters, certain commands such as Proc FREQ automatically truncate value labels to 16 characters. This can yield incorrect results, because after truncation, like values can be combined if the first 16 characters of the value labels are not unique.

Gender, Mental Illness, and Crime in the United States, 2004

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

The following variables each represent a specific dependence indicator (according to DSM definition of dependency) for a specific drug category. They were then used to create dependence dummy and scale variables for separate drug categories, clusters (marijuana, cocaine, other), and a combined “any drug.”
